

DRYFLUID EXTREME - High End lubricants with system

03/24/2014 15:57 by Admin (comments: 0) DryFluid

SLIDE-LUBRICANT INSTEAD OF OIL

DryFLuid is a dry slide-lubricant rather than a classic oil or grease. DryFluid is not wax, it is neither greasy nor oily but is silicone-free. A long-lasting lubrication effect is achieved using dry particles, sliding polymers and high end sliding fluids. The application and long-term effects of DryFluid Extreme will inspire every RC pilot.

RC Cars

BALSAM FOR RC CARS

DryFluid Extreme was specially developed for radio controlled model cars with the aim to preserve as long as possible or rather to extend significantly the efficiency and lifetime of these mechanical marvels. The effect of this new lubricant for links, shafts and bearings begins where others show their limits. Lowest sliding friction, maximum speed and minimal dust and dirt binding were the main objectives of the development. Findings in the aviation and vehicle industries and the expert knowledge of RC car pilots are the driving forces behind this new lubricant.

- Reduction of power loss on links, shafts and bearings and it guarantees a long life of the treated components.
- Lowest sliding friction for free movement and wear reduction
- Multistage lubricant system with immediate and long-term effects
- Dust and dirt repellent
- Extremely good creeping abilities
- Excellent material compatibility with all current metal, plastic and natural rubber materials
- Outstanding adhesive and anti-corrosive properties

RC Heli

DryFluid Extreme was specially developed for radio controlled model helicopters with the aim to preserve as long as possible or rather to extend significantly the efficiency and lifetime of these mechanical marvels. The effect of this new slide-lubricant for links, shafts and bearings begins where others show their limits. Lowest sliding friction, maximum speed and minimal dust and dirt binding were the main objectives of the development. Findings in the aviation and vehicle industries and the expert knowledge of RC Heli pilots are the driving forces behind this new lubricant.

DryFLuid is a dry slide-lubricant rather than a classic oil or grease. DryFluid is not wax, it is neither greasy nor oily but is silicone-free. A long-lasting lubrication effect is achieved using dry particles, sliding polymers and high end sliding fluids. The application and long-term effects of DryFluid Extreme will interest every RC pilot.

- Reduction of power loss on links, shafts and bearings and it guarantees a long life of the treated components
- Lowest sliding friction for free movement and wear reduction

Gear Lube - for modelling Gears

DryFluid Extreme Gear Lube was specially developed for highly stressed gears in modelling applications. Findings in the aviation and vehicle industries as well as the expert knowledge of many RC drivers are the driving forces behind this innovative modelling lubricant. It is characterized by a low sliding friction during an extreme compressive resistance and an excellent adhesive force. Due to the use of high-end slide lubricant components, DryFluid has minimal dust and dirt adhesion.

The main fields of application of DryFluid Extreme Gear Lube are gears of model helicopters, RC cars, trucks, model railways and servos. Also applicable for axles, joints and bearing systems in any modelling application.

DryFluid Extreme Gear Lube is a dry lubricant rather than a classic grease. DryFluid is not wax; it is neither greasy nor oily but is silicone-free. A long-lasting lubrication effect is achieved using dry particles, sliding polymers and high-end sliding fluids. After application the fluid becomes dry and forms a white lubricant film. The application and long-term effects of DryFLuid Extreme Gear Lube will interest every modeller.

- Unprecedented lubricating properties

- Reduction of power loss through friction
- Reduction of running noise
- Reduction of wear
- Extreme pressure resistance
- Long-term stability
- Excellent adhesion
- Excellent material compatibility with all current metal, plastic and natural rubber materials
- Dust and dirt repellent

Slot Cars

DryFluid Extreme Slot was specially developed for slot cars with the aim of optimising the speed of these miniature racers.

The effect of this new slide lubricant begins where others show their limits. Lowest sliding friction, maximum speed and minimal dust and dirt binding were the main objectives.

The newest developments in the aviation and vehicle industries and the expert knowledge of top-flight slot car drivers are the driving forces behind this innovative lubricant.

- Reduction of power loss on axles and bearings
- Lowest sliding friction for free movement and wear reduction
- Multistage lubricant system with immediate and long-term effects
- Dust and dirt repellent
- Extremely good creeping abilities

- Excellent material compatibility with all current metal, plastic and natural rubber materials
- Outstanding adhesive and anti-corrosive properties Gain the advantage with DryFluid Extreme

Glide Power XT

Power Glide XT reduces the frictional resistance and ensures absolute smooth running, even under extreme operating conditions. The Power Fluid eliminates squeaking, creaking, stuttering and this for a long time. The application areas are plain bearings, ball bearings, guides, hinges, linkages, joints, shafts, rollers.

Typical applications are tools, chains, car's, locking systems, doors, drawers, garden equipment, boats or bicycles.

- Lowest sliding friction for free movement and wear reduction
- Extremely good creeping abilities
- Reduction of wear
- Multistage lubricant system with immediate and long-term effects
- Extremely Fertilely
- Water resistant
- Extreme pressure resistance
- Dust and dirt repellent
- Excellent material compatibility with all current metal, plastic and natural rubber materials
- Outstanding adhesive and anti-corrosive properties
